SYSTEMS TECHNOLOGY AND RESOURCE TRAINING

Build a strong foundation and fast-track your career while learning the audiovisual industry from the ground up

ELECTROSONIC

WHAT IS **START**

Electrosonic **START** is a highly focused program for new professionals designed to fast track your career in audiovisual with one of the world’s leading technology companies. Throughout a progressive nine-month program, you’ll gain hands-on experience working with experts in their field and contributing directly to live projects that push the boundaries of audiovisual technology.

How **START works**

You’ll follow one of four career tracks, gaining initial experience and understanding of the whole business in our core departments while shadowing Electrosonic professionals in your chosen discipline and taking on tasks in real-world projects.

The four tracks are Design Starter, Engineering Starter, Technician Starter and Production Starter.

What you’ll gain

As well as gaining skills and hands-on experience of projects and technology directly related to your chosen career path, you’ll have the opportunity to gain other important industry certifications.

You’ll be paid throughout the program and, on successful completion, you’ll qualify for full-time employment opportunities with Electrosonic.

WHY WORK WITH ELECTROSONIC

Few companies in the audiovisual market can offer you the breadth of experience while you learn as Electrosonic. We design, build and support ground-breaking, award-winning audiovisual solutions that are changing the way global clients in businesses, theme parks, museums, hospitality venues and retailers meet their customers’ expectations.

These are not just simple projector and screen setups or systems. You could be working on 360° immersive experiences, interactive displays, sophisticated dome projection and projection mapping solutions, massive LED displays and videowalls, directional audio and converged experiences where the boundaries between technologies overlap.

We’ve delivered those solutions for projects as diverse as The Sheikh Abdullah al Salem Cultural Centre, the largest museum complex in the world, a customer experience center for Google, interactive exhibits at the International Spy Museum or attractions at Universal Studios venues around the world.

Solutions like that don’t happen by accident. They’re the result of great teamwork by designers, engineers, production staff, installation technicians and support staff and that’s where you’ll make your contribution as you develop your skills through the **START** program.

Don’t take our word for it

Electrosonic believes in investing in its employees through constant learning and programs like **START**. Our employees believe it too. Here’s what three **START** graduates have to say about the program.

“Electrosonic provided me with a unique opportunity as a Design Starter. They provided core training on design principles and they enabled me to explore out of the box ideas. I felt like my ideas were being taken into consideration and my voice was being heard. They worked with me to create a new position that would help Electrosonic grow and enable me to pursue my interests.”

Felipe Torres

“The **START** program is unique in many ways. Most importantly, it offers the time, dedication and training to develop a well-rounded foundation for your career. Regardless of which role you choose, the **START** program ensures you understand how your contributions impact the success of projects and the company as a whole. You actively contribute to world-class projects and provide a valuable, fresh perspective to the team.”

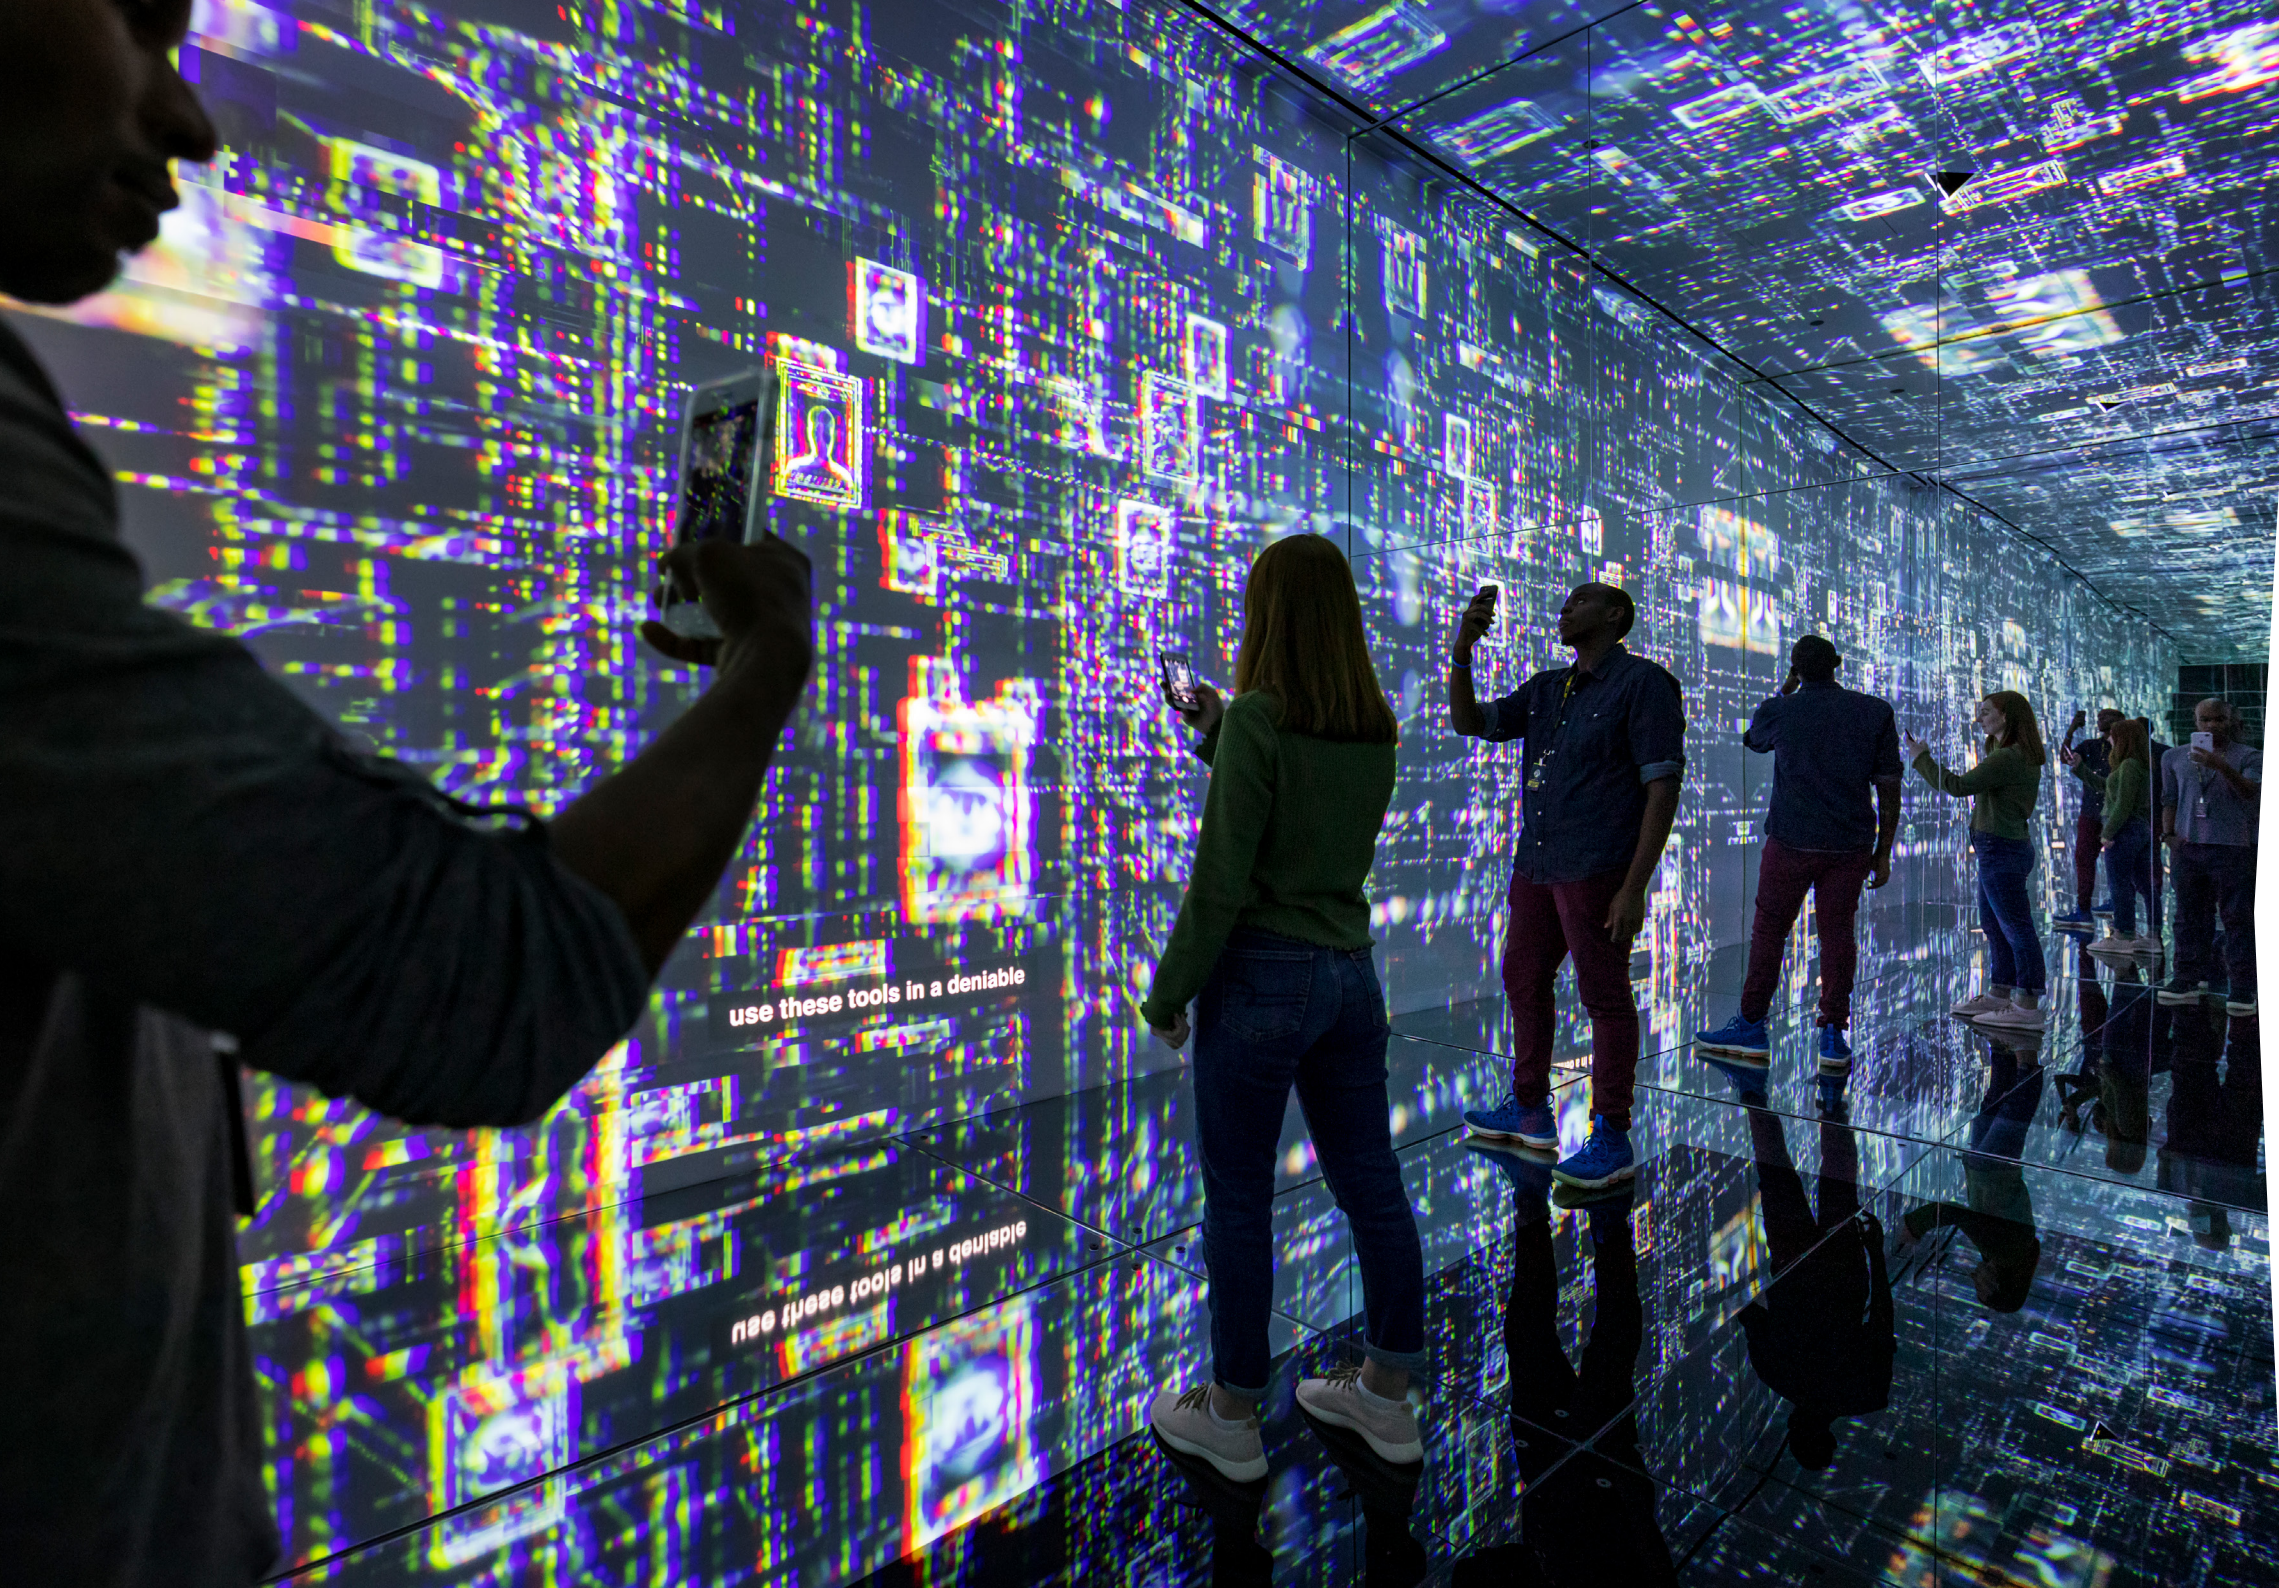

Sean McChesney

“As someone completely new to the industry, the opportunity to gain hands-on experience at Electrosonic provided me with invaluable knowledge I don’t think I could have found anywhere else. Now as a full-time employee, I still draw on my **START** experience to use for my benefit.”

Ben Alwag

ARE YOU READY FOR **START**

We're passionate about innovation, focused on our customers, united as one team, constantly learning, always accountable and act with the utmost integrity. Right now, our industry has never been more important so we need people who can help us deliver the next generation of ground-breaking technology solutions.

The **START** program gives you the opportunity to join a team and grow with a global team of professionals who can take your skills to new levels. We're looking for people with a mix of educational and personal skills:

- Recent college graduate with an Associates, Bachelors or Masters degree
- A technical education if you're interested in the Technician or Production programs
- Self-motivated, willing to take initiative, open to coaching
- Passion and aptitude for technology
- Professional communication skills (written and verbal)
- Proficient in Microsoft Office Suite
- Experience with software programs, design or CAD, and/or programming languages is a plus

If you're ready to take your education and career to the next level with the **START** program, send your cover letter and resume to:
